[Seville, Spain]

PROFESSIONAL SUMMARY

Senior Geospatial Specialist with over 9 years of international development experience at UN-Habitat, expert in delivering high-quality decision-support and geospatial analytics to inform strategic public-sector choices. Specialized in navigating data-scarce environments and fragmented systems by leveraging proxy modeling, open-source data, and Earth Observation. Proven track record combining advanced geospatial expertise with a deep understanding of urban development, infrastructure planning, climate resilience, and public-sector institutions to translate complex spatial information into actionable recommendations for investment prioritization, project design, and long-term institutional strengthening. Bridging the technical gap between engineering teams, environmental leads, and high-level stakeholders to optimize capital investments in urban infrastructure.

TECHNICAL SKILLS

- **Software Stack:** ArcGIS Pro, QGIS, PostGIS, Power BI, Python, R, Google Earth Engine, and Kobo Toolbox.
 - **Data Architecture & Management:** Advanced PostgreSQL/PostGIS (Schema design, Multi-user administration, and Data Integrity), ETL/ELT logic, and Geodatabase modeling.
 - **Spatial Analytics & Automation:** Automated scoring systems, Multidimensional spatial modeling, and Python/SQL-supported analytical matrices.
 - **Visualization & Reporting:** Power BI and Strategic Reporting for Stakeholders.
 - **Geospatial Strategy & Innovation:** Systematization of technical workflows, Digital Transformation of urban diagnostics, and Methodological Documentation.
-

PROFESSIONAL EXPERIENCE

UN-Habitat | UN-Habitat Jordan | **Spatial Data Lead Jordan** | July 2025 – Present

- **Urban Data Systems & Architecture:** Designed and implemented end-to-end data architectures and data lifecycles for public space inventories, establishing robust PostGIS schemas and protocols for multi-user governance across public-sector institutions.
- **Spatial Integration for Investment Planning:** Engineered an integrated spatial analysis framework and logic-driven automated scoring system using SQL to weight multidimensional variables, directly informing the identification of priority areas and transparent site selection for capital investment.
- **Custom Digital Tools & Client Governance:** Developed a tailored digital tool responsive to client needs and institutional governance, bridging institutional gaps and improving efficiency.
- **Digital Transformation:** Led the transition from raw data collection to executive Power BI dashboards, converting complex spatial findings into clear implications for high-level decision-makers and donors.
- **Methodological Systematization & Municipal Capacity Building:** Authored a comprehensive "data-to-plan" framework and delivered targeted training to municipal technicians and urban planners, ensuring institutional sustainability, local ownership, and system scalability.

UN-Habitat | Ukraine Urban Lab | Spatial Data Management Specialist *Ukraine | February 2024 – June 2025*

- **Geospatial Data Management in Crisis Contexts:** Led spatial data management operations across crisis-affected regions, integrating fragmented, under-standardized, and multi-source datasets into a coherent Geodatabase Architecture (+20 spatial layers across 8 municipalities).
- **Technical-Institutional Liaison:** Served as the strategic bridge between engineering labs (UNITAC/City Science Lab) and urban planners, translating "Build Back Better" recovery modeling into accessible visual evidence for municipal decision-making.
- **Standardization for Innovation:** Documented and systematized spatial diagnostic methodologies for crisis-affected areas, creating a replicable institutional framework for scalable urban recovery efforts.
- **QA Systematization & Lessons Learned:** Systematized Quality Assurance protocols and "lessons learned" during recovery operations, transforming field-level data insights into institutional knowledge assets ensuring model reproducibility.

UN-Habitat | Headquarters Urban Lab & Global Public Space Programme | Spatial Data Analyst *Kenya | January 2018 – December 2023*

- **Decoding Global Spatial Phenomena:** Led the deconstruction of high-level strategic goals (New Urban Agenda/SDGs) into measurable spatial indicators. Identified data proxies and innovative modeling approaches to simulate complex urban dynamics in data-scarce environments.
- **Location Intelligence for Investment & Strategy:** Applied advanced spatial analytics for territorial strategy, translating complex spatial information into actionable recommendations for investment prioritization, project design, implementation support, and long-term institutional strengthening.
- **Climate Resilience & Hazard Analytics:** Developed advanced spatial scenarios, network accessibility models, and hazard risk matrices to evaluate territorial vulnerability, climate risks, and infrastructure gaps in data-scarce global contexts.
- **Geospatial Database Architecture & Scalable ETL:** Designed complex geodatabases and implemented reproducible technical ETL execution for large-scale international projects, ensuring data structural integrity and multi-scalar scalability.
- **Institutional Capacity Building & Leadership:** Authored technical manuals and delivered technical training programs for multidisciplinary teams and local government officials, raising digital maturity and spatial data governance at the institutional level.

Pontifical Catholic University of Peru (PUCP) | DARS | Programme Assistant *Lima, Peru | June 2015 – July 2016*

- **Multi-level Stakeholder Coordination:** Facilitated communication between academic, social, and government sectors, ensuring alignment between project objectives and local data requirements.
- **Technical Operational Support:** Provided support in project design, standardizing procedures to align institutional goals with community-level data collection.

Global Water Partnership South America | Programme Assistant *Lima, Peru | April 2014 – June 2015*

- **Remote Sensing & Territorial Analysis:** Performed satellite imagery processing and thematic mapping, ensuring high-quality spatial inputs for regional water governance.
- **Field Data Validation:** Led on-site teams for strategic information gathering, ensuring accuracy and technical integrity during primary data collection.

EDUCATION

- **MSc in Regional and Urban Planning Studies** | London School of Economics (LSE), UK. *September 2016 – June 2017*
- **Specialization in PostGIS & SQL for GIS** | Geoinnova, Spain. *September 2025 – November 2025*
- **Executive Program in Data Analytics** | Datahack School, Spain. *September 2023 – December 2023*
- **Specialization in Territorial Management** | INTE PUCP, Peru. *September 2015 – December 2015*
- **Specialization in Territorial Planning** | INTE PUCP, Peru. *June 2015 – August 2015*
- **BA in Geography and Environment** | PUCP, Peru. *August 2007 – July 2013*
- **Continuous learning:** Specialized tracks in R, Python, and Cloud Analytics (DataCamp / GEE).

LANGUAGES AND CODE

- **Spanish:** Native.
- **English:** Full professional proficiency (C1/C2).
- **Programming Languages:** SQL (Advanced), R (Intermediate), Python (Intermediate).
